KEYPAD TROUBLE DISPLAY

Key **"ON"** =

[1] No battery/low voltage	**[7]** Communicator report failure
[2] Power failure	**[8]** Timer loss*
[4] Bell disconnect	**[9]** Tamper or zone wiring failure
[5] Maximum bell current	**[10]** Telephone line failure
[6] Max auxiliary current	**[11]** Fire loop trouble

* To clear timer loss trouble, see Key Access Programming **[MEM]**. Press **[CLEAR]** to clear troubles.

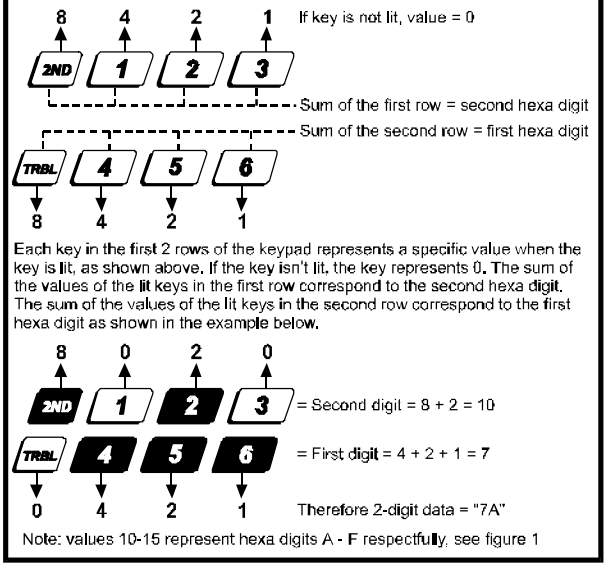
HEXA DIGIT DATA DISPLAY FOR LED KEYPADS

Note: LCD keypads will display current data on the screen.



Note: values 10-15 represent hexa digits A - F respectfully, see figure 1

HEXA PROGRAMMING:

Addresses 000 to 043 and 300 to 527 are programmed using the Hexa Programming method. In this mode, you can enter any hexa-digit from 0-F where keys [1] to [9] represent digits 1 to 9 respectively; the other keys represent hexa digits A to F as shown in figure 1. To program using the Hexa Programming method:

1) Press **[ENTER]** + *Installer Code (default: **737373**)*
2) The **[ENTER]** key will flash indicating you are in programming mode
3) Enter the desired 3-digit address
4) The keypad will display the 2-digit data currently saved at this address as described in figure 2
5) Enter 2-digit data; after entering data you do not need to press [ENTER], the software will automatically save the data into the selected address
6) Return to **step 2** or press **[CLEAR]** to exit programming mode

STREAMLINED SECTION PROGRAMMING

This is an alternate method to Hexa Programming. The addresses (000-043 and 300-527) programmed in the Hexa Programming method are grouped into 67 sections where each section contains four addresses (i.e. section 00 = addresses 000-003). Using this method allows you to program 8 digits (4 addresses) without having to exit and re-enter addresses. Note, the keypad will not display the current data in the Hexa Streamlined Programming method. To program using the Hexa Streamlined Section method:

1) Press **[ENTER] +** *Installer code (default: **737373**)* **+ [7]**
2) The [ENTER] and [2ND] keys will flash to indicate you are in programming mode
3) Enter **2-digit section** (00-67)
4) The [ENTER] key will remain on while the [2ND] key will be off
5) Enter **8-digit data** to program the section
6) The keypad will "beep" to indicate that the section has been programmed, data is saved and the software has advanced to the next section
7) Return to **step 4** or press **[CLEAR]** to exit programming mode

INSTALLER CODE (Default 737373)

Full access to programming, except user access codes. No access to arming/disarming. Use only numeric keys from **[1]** to **[10]**. (key **[10]** = 0)

PANEL ANSWER OPTIONS

First digit disables "Answering Machine Override" (key **[2ND]** or key **[1]**), or determines period of time between first and second call (see table below). Second digit determines number of rings required before panel will answer. If **[2ND][2ND]** is entered, panel will not answer. (Default value is **[2ND] [8]**.)

Streamline section	Data	Description	Address
00	___/___	Installer code (1st, 2nd digit)	000

REPORTING CODES: All digits from **[1]** to **[F]** are valid. **[2ND]** = digit will not be reported except for contact I.D. programmable codes. For single digit reporting enter "skip" (**[2ND]**) as first digit. (Default = "empty" **[2ND] [2ND]**)

If CONTACT I.D. format (all codes) is selected, addresses 300 to 527 (sections 11- 67) do not have to be programmed. (Select Contact I.D. (all codes) - key **[10]** for both central station numbers at section **09** - address **038**.)

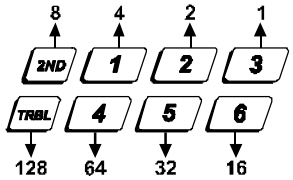
DECIMAL PROGRAMMING

1) Press **[ENTER] +** *Installer Code (Default: **737373**)*
2) The [ENTER] key will flash to indicate you are in programming mode
3) Enter **3-digit address** (044-061)
4) The keypad will now display the current 3-digit data currently saved at this address as described in figure 3
5) Enter **3-digit data** (000-255) value; after entering data you do not need to press **[ENTER]**, the software will automatically save the data into the selected address
6) Return to **step 2** or press **[CLEAR]** to exit programming mode

FIGURE 3

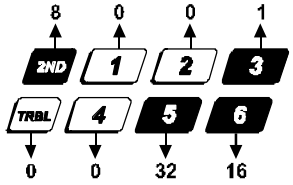
DECIMAL DISPLAY FOR LED KEYPADS

Note: LCD keypads will display current data on the screen.



Each key in the first 2 rows of the keypad represents a specific value when the key is lit, as shown above. When the key isn't lit, the key represents 0. Add the values of the lit keys to obtain the entered data value as shown in the example below.

Example



Therefore 8 + 1 + 32 + 16 = 057

FEATURE SELECT PROGRAMMING

Addresses 062 to 126 are programmed using the Feature Select Programming method. In this method, every key on the keypad in each address represents an option or feature. Pressing a key will display it on the keypad and pressing it again will extinguish the key. The On/Off status of each key determines the selected feature. To program using the Feature Select Programming method:

1) Press **[ENTER]** + *Installer Code (Default: **737373**)*
2) The [ENTER] key will flash to indicate you are in programming mode
3) Enter **3-digit address** (062-126)
4) After entering the address, the keypad will display the feature selection status. Turn the keys On/Off by pressing the appropriate key until the desired options are set. Then press the **[ENTER]** key to accept, there will be a confirmation "beep" indicating the options have been accepted. The [ENTER] key will flash to indicate that the software is awaiting the next address entry
5) Return to **step 3** to continue programming or press **[CLEAR]** to exit programming mode

Note: Do not use the Intellizone feature and an entry delay for the same zone, otherwise an alarm may occur as a user tries to disarm the system.

KEY ACCESS PROGRAMMING

Programs features quickly, without entering addresses or section numbers.
To activate "key access programming", press **[ENTER]**, followed by installer, master or user code 1. (Code required depends on the feature you wish to access - see below.) Press the key corresponding to the desired feature.
Press **[ENTER]** or **[CLEAR]** to exit.

key

[8] **Installer test mode** *(installer code only)*
In installer test mode, a confirmation beep (intermittent) indicates test is "on", a "rejection" beep (long) indicates test is "off". The bell will squawk during walk testing to indicate opened, functional zones.

[9] **"Auto arming" time program** *(all 3 codes)*
Key [9] flashes. Enter two digits (00 to 23) for hours + 2 digits (00 to 59) for minutes.

[MEM] **"Panel time" and clear "trouble 8"** *(all 3 codes)*
Key **[MEM]** flashes. Enter two digits (00 to 23) for hours + 2 digits (00 to 59) for minutes.

[BYP] **Test report** *(all 3 codes)*
Reporting is enabled at address **086**, keys **[11]**, **[12]**. A value must be entered at address **512**, and both telephone and account numbers must be programmed.

[TRBL] **Call Esploud via telephone** *(all 3 codes)*
Panel identifier and PC password (addresses **004-007**) and computer telephone number (addresses **008**-**015**) must be programmed.

[AWAY] **Answer Esploud** *(all 3 codes)*
This feature is available when using the ADP-1 adapter. In Esploud, "blind dial" must be activated in "modem setup" section, and panel phone number programmed (works also without ADP-1).

[STAY] **Cancel communication attempts** *(master code and user 1 can only stop calls to Esploud)*
Until next reportable event *(installer code - all communications)*

When communicating with Esploud, it is impossible to enter programming mode.

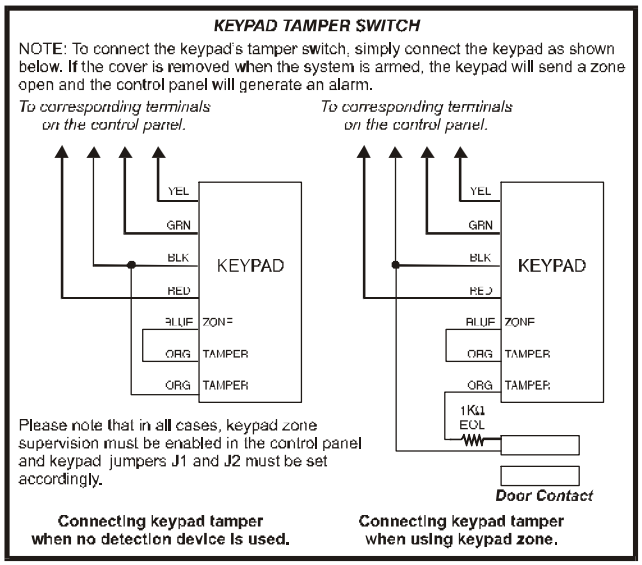
NOTE: To connect the keypad's tamper switch, simply connect the keypad as shown below. If the cover is removed when the system is armed, the keypad will send a zone open and the control panel will generate an alarm.



Please note that in all cases, keypad zone supervision must be enabled in the control panel and keypad jumpers J1 and J2 must be set accordingly.
